Microbiological Specifications

Methods – The product and environmental samples will be analyzed using approved microbiological methods.

Micro-Organisms	Maximum
Total Plate Count	<100,000 cfu/g
Coliforms	<100 cfu/g
General E.Coli	<10 cfu/g
Yeast & Mold	<10,000 cfu/g
<i>Salmonella</i>	Absent/25g
<i>Listeria Monocytogenes</i>	Absent/25g
<i>Staphylococcus Aureus</i>	<10 cfu/g
<i>E. coli O157:H7</i>	Negative

Packaging Requirement

- Bulk tote with blue polyethylene in-liner
- Bulk carton with blue polyethylene in-liner,
Example: 10kg, 20kg
20lb, 30lb, 40lb

Inner liner must be at least 60 microns thick.

Labelling Requirements

- Lot Number
- Country of Origin
- Producer Name
- Net Weight per Tote or Case
- Production Date
- Expiry Date
- Storage Temperature

Legislation

The raw material is suitable for the usage in foods according to US regulations CFR.

It complies with the US regulations for food containing pesticide residue levels (sections 402, 408 and 409 of the Federal Food, Drug and Cosmetic Act (FFDCA)). The product shall contain no pesticide residues unsafe within the meaning of Government of Canada Pest Control Products Act and Regulations. The co-packer guarantees that all pesticides applied are registered both in Canada and the USA and that labeled dosages have been followed.

Supplier must have a grower program to ensure compliance in accordance with USDA GAP (USDA Good Agricultural Practices), Canada GAP or equivalent. The co-packer is responsible for monitoring compliance with the USDA GAP or equivalent standards for land preparation, water safety, field sanitation, employee hygiene, pesticide spray applications, traceability, training and documentation of defined standards.

Raw material must be traceable to the farm. During processing, keep records of pallet identification (crates/trays) back to the field/grower/producer including date, time of receipt and grower name.

Inline metal detection checks must be performed every hour with 2.0mm ferrous, 2.5mm non-ferrous and 3.0mm stainless steel test cards. Verification/ Calibration of metal detector must be performed at a minimum at start of production, at every break and every hour during production run.
